

1. After installing XAMPP application and if you need to save your PHP files on your PC, in what a place can you save it and in what extension for these files?

Sol / in c in XAMPP file in ftdoucs and php extension for these files

2. htdocs is acronyms for what?

Sol / HyperTextDocumentS

3. Suppose your PC is running with Windows operating system, can you install MAMP package on it? Explain your answer.

Sol / we can not install MAMP in Windows cuz simply it was created to deal with the Mac system

But in modern versions it has been made to work on Windows as well

4. Give me some examples about some web sites that are built with PHP.

Sol / Facebook \ Wikipedia \ Tumblr \ WordPress

5. As you remember, JavaScript is a popular client-side programming language and it has the ability to change the content and style of a web page dynamically. One question you may be asking is, “Why do we need a server-side programming language, too?”

Sol /

JavaScript: Browser changes (client-side).

Server-side language: Data processing, storage, security.

Server manages database interactions for processing.

Enhanced security through server-side tasks.

Improved performance with server execution.
