

Q1 / Which the preference single or double quotes for PHP developers and why?

Sol / The main difference is that variables will be interpreted in double quoted strings but not single. "\$hello" gives the value of the variable \$hello whereas 'hello' will give the literal string \$hello

Q2 / If you forget the semicolon in the end statement of PHP code, what will PHP processor display for your code, try this by writing a small program in PHP?

Sol / will show parse error by means error in the processing

Q3 / use Including Files

```
<?php
    include 'file1.php';
?>
```

```
<?php
function mytest() {
    static $x = 3;
    echo $x;
    $x++;
}

mytest();
echo "<br>";
mytest();
echo "<br>";

?>
```
